IA10 Indicator and Alarm Unit Quick Start Guide

Model: IA10 Ver. QS0IA101A EN

1. OVERVIEW & APPEARANCE

- Indicators:**
- Ⓐ AL1/ AL2/ AL3/ AL4/ AL5: Alarm 1~5 Indicator
 - Ⓓ FZ: Hold PV1, frozen to value 0
 - Ⓔ HD: Hold PV1 to the current value
 - Ⓜ MX: Hold PV1 to the maximum value
 - Ⓢ MAN: Manual Mode Indicator
 - Ⓣ COMM: Communication Indicator
 - Ⓚ Key: Lock Indicator
- Process Value/ Unit:**
- Ⓑ Degree: Process Value Unit, °C or °F
 - Ⓒ PV1: Process Value 1, 5-digit
 - Ⓙ PV2: Process Value 2, 5-digit
- User Access Keys:**
- Ⓚ SHIFT Key
 - Ⓛ UP Key, Increasing
 - Ⓜ SCROLL Key, Enter
 - Ⓝ DOWN Key, Decreasing

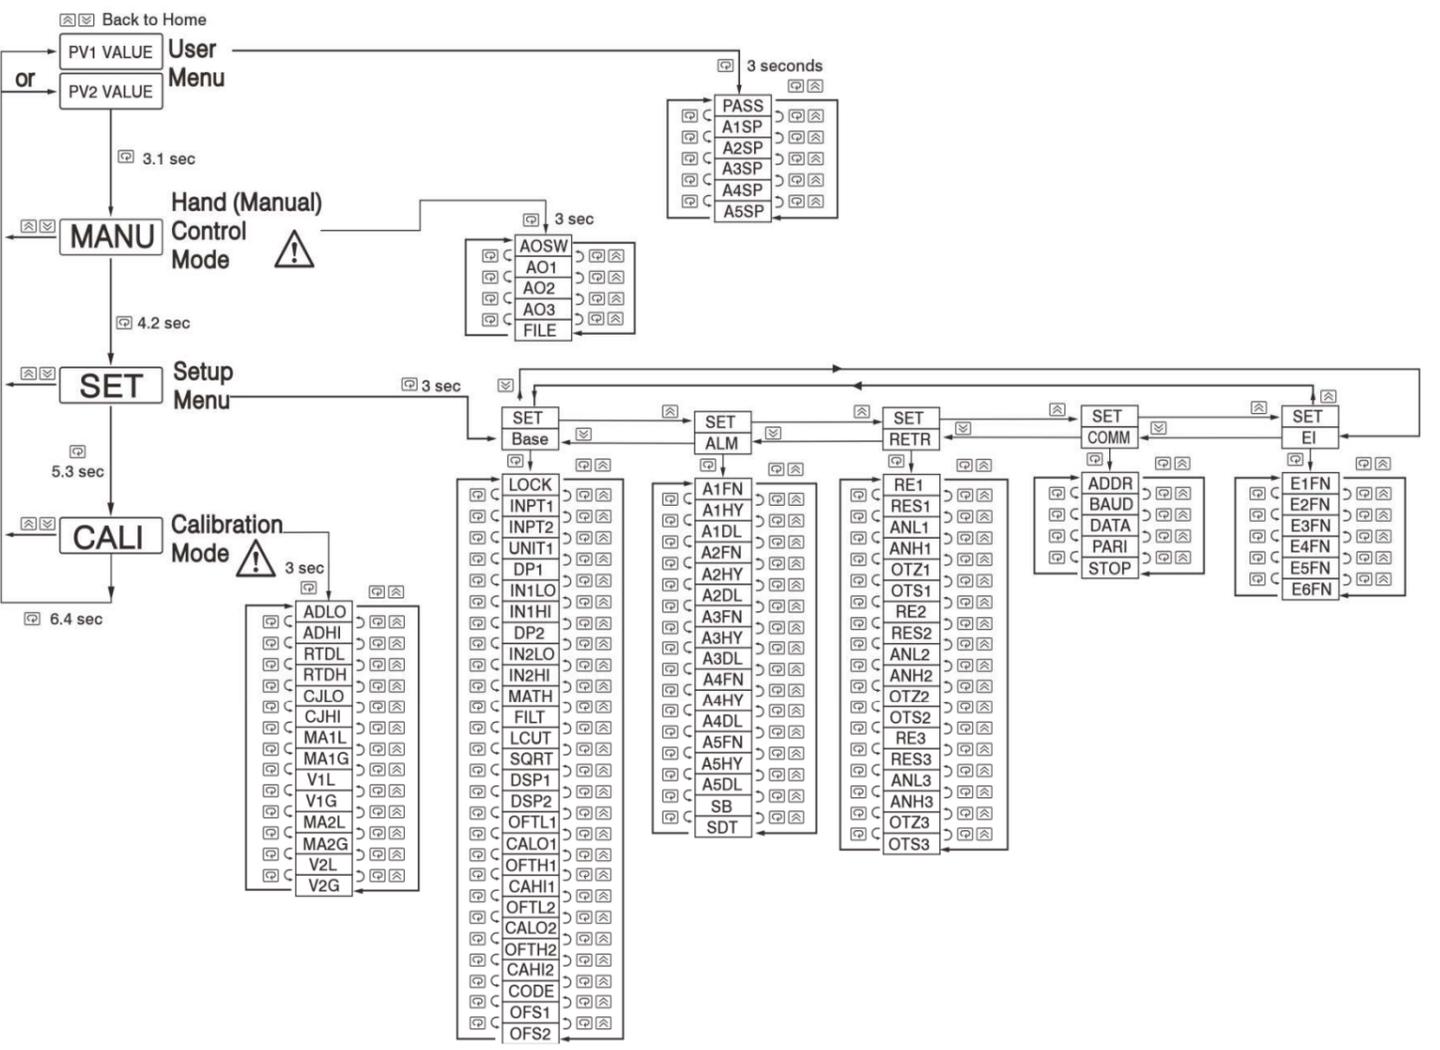

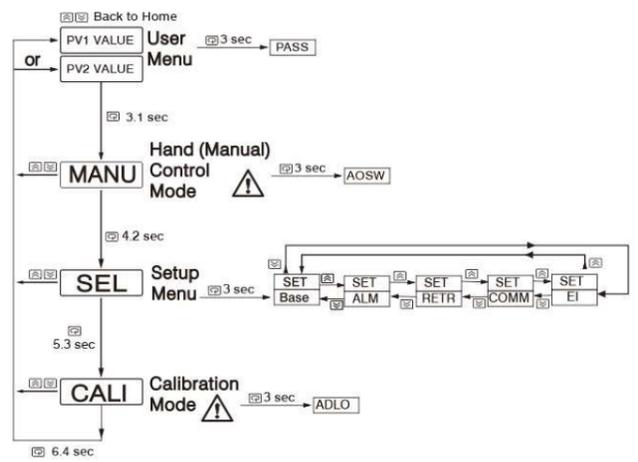

2. DISPLAY AND KEYS

During power-up, the upper display will show PROG and the lower display will show the Firmware version for 6 seconds. There are 4 Keys available in the display board for the user to operate as explained below.

- **SCROLL KEY or ENTER KEY:** This key is used to select a parameter to be viewed or adjusted.
- **UP KEY:** This key is used to increase the value of the selected parameter.
- **DOWN KEY:** This key is used to decrease the value of the selected parameter.
- **SHIFT KEY:** This key is used to move to the digit of the selected parameter and change the value by using up or down key to increase or decrease the value.
- **RESET KEY:** Two keys pressed synchronously are used to revert the display to the home screen, the process values screen

3 MENU FLOW CHART

The Menu has been divided into 5 groups. They are as follows:

- 1) PV & SetPoint (PV1/ PV2)
- 2) Manual Mode Menu (MANU)
- 3) Setup Menu (SET)
- 4) Calibration Mode Menu (CALI)

3.1 USER MENU

Press the key for 3 seconds and release it to get User in the lower display and then use the key to enter into User Mode parameter.

3.2 MANUAL MODE MENU (MANU)

Press the key for 3 seconds and release it to get MANU in the lower display and then use the key to enter into Manual Mode parameter.

3.3 Setup Menu (SET)

Press the key for 3 seconds and release it to get SET menu in the lower display and then use the key to get SET (Base/ ALM/ RETR/ COMM/ EI) parameters in the second lower display. Use the key to enter into Base/ ALM/ RETR/ COMM/ EI parameters. Press the keys synchronously anytime to go back to the home.

3.4 CALIBRATION MENU (CALI)

Press the key for 3 seconds and release it to get CALI in the lower display and then use the key to enter into Calibration Mode parameter.

Note: The flow chart shows a complete list of all parameters. For actual application, the number of available parameters will vary depending on the setup and will be less than that shown in the flow chart.

4. PARAMETERS DESCRIPTION

| Reg Addr | Code | Parameter | Range | Def-ault | Data Type | Scale Low | Scale High |
|------------------|--------|---|--|----------|-----------|-----------|------------|
| 3 | DP1 | Decimal point selection 1 | 0) No.dP: No decimal point 1) 1-dP: 1 decimal digit 2) 2-dP: 2 decimal digits 3) 3-dP: 3 decimal digits 4) 4-dP: 4 decimal digits | 1 | R/W | 0 | 65535 |
| 22/23 | IN1LO | Input1 low scale value (H-L) | IN1LO ≠ IN1HI (°F) Low: -19999, High: 99999 | 0.0 | R/W | -19999 | 99999 |

6. PROGRAMMING

Signal Input

INPT: Select the sensor type or signal type for signal input

Range: (Thermocouple) J_tC, K_tC, T_tC, E_tC, B_tC, R_tC, S_tC, N_tC, L_tC, U_tC, P_tC, C_tC, d_tC(RTD) PT.DN, PT.JS, (Linear) 4-20, 0-20, 0-5V, 1-5V, 0-10V, 0-1V, 0-50mV

Retransmission

The signal conditioner will output (retransmit) PV on its output terminals of output1, output2 and output3. ANL1 and ANH1 are adjusted to specify the low scale and high scale values of output1 retransmission. Similarly, ANL2, ANL3, ANH2 and ANH3 parameters are adjusted for output2 and output3.

Zero and Span adjustment

The signal conditioner has the option to adjust the zero and span of the outputs to meet the required accuracy. The user can adjust the parameters otZ1, otZ2 and otZ3 to adjust the zero value of the output1, output2 and output3 respectively. The user can adjust the parameters otS1, otS2 and otS3 to adjust the span value of the output1, output2 and output3 respectively. The allowable range for zero and span adjustment is from -1.000 to 1.000.

Square Root function (SQRT)

The square root function (SQRT) function will output the square root value of the PV. The square root function will be enabled by setting the parameter SQRT.

Manual Control

Some application requires to test with the manual output from the signal conditioner. Use key to access the MANU mode, to navigate to the manual mode control parameter AOSW. Set AOSW to ON to start the manual mode output. Use the key to select the desired output parameters AO1, AO2 and AO3. Use the key to move to the digital position. Use the keys to set the required output values. Set AOSW to OFF to stop the manual output.

7. ERROR CODE

| Error Code | Display Symbol | Description & Reason | Corrective Action |
|------------|----------------|--|---|
| 10 | ER10 | Communication error: bad function code | Correct the communication software to meet the protocol requirements. |
| 11 | ER11 | Communication error: register address out of range | Do not issue an over-range address of the register to the slave |
| 14 | ER14 | Communication error: attempt to write a read-only data | Do not write read-only data or protected data to the slave. |
| 15 | ER15 | Communication error: write a value which is out of range to a register | Do not write an over-range data to the slave register |
| 29 | EEPR | EEPROM can't be written correctly | Return to factory for repair. |
| 30 | CJER | Cold junction compensation for Thermocouple malfunction | Return to factory for repair. |
| 39 | SBER | Input sensor break, or input current below 1 mA if 4-20 mA is used, or input voltage below 0.25V if 1-5V is used | Replace the input sensor. |
| 40 | ADER | A to D converter or related component(s) malfunction | Return to factory for repair. |
